

Product Requirements Document

Project Buff Bunny Builds

UCF Bloom Knights

Team Name

Project Manager: John Ruiz

Date of Creation: 08/11/2026

Version 1.0

Introduction

An AI-driven academic “manager” that helps college students track degree requirements, course offerings, and schedules to hit specific goals like internships, scholarship, or skill building through the lens of a Pop Stardom. By analyzing onboarding data and chat histories, the program offers personalized suggestions to users and an interactive dashboard, using a pop-culture inspired concept to motivate students to reach for the stars.

Problem Alignment

Problem

College students create unhealthy work-life balance because they don't know what goals to prioritize and services available cannot keep students accountable to progress and require time obligations out of the students.

Why this Matters

Competition amongst entry-level jobs force students to take heavy workload to keep up with demands such as volunteering, double majors, and minors. Without guidance, students are overwhelmed leading to a failure to prioritize goals that matter and losing time trying to manage their lives rather than living it

Data Point: 55% of students report experiencing burnout, according to a 2026 [Crown Counseling Poll](#).

Target User & Pain Points

Target Group: UCF Undergraduate Students between the age of 18 and 25. Their personalities are ambitious, and goal driven. Undergraduate students want a way to simulate their decisions that affect their, schedule, personal time, and goals without having to spend hours manually doing it themselves.

Primary User: UCF undergraduate students juggling heavy schedules trying to build towards a career.

User Pain Points

- Picking elective classes that align with career goals and not easy A's"
- "This class might be filler if I stop pursuing dentistry."
- "Should I get a job, or will it overwhelm me with my current schedule?"

Current Alternatives & Shortcomings

Internal Tools (Pegasus Path, Degree Audit, Custom Spreadsheets): While these tools allow students to simulate paths, they require manual input of data and cross reference amongst several tools for an accurate read. Some counselors even warn students that Pegasus Path may be inaccurate.

Human Services (UCF Academic & Career Services): While these services help students develop a plan towards career-goals, they rely entirely on student-initiated outreach and lack personalization with thousands of students to manage. T

Flaws: Existing solutions push 100% of the administrative burden to exhausted students wasting time away from progress towards their career path and goals. They need the ability to be able to always receive a quick answer to lessen the pressure they feel which in turn will motivate students progress even more towards goals.

Solution Alignment

Product Vision

A personal “*manager*” available to students 24/7 to keep track of progress towards career goals (internship, degree requirement, coursework, skill building, etc.) and to answer students’ question opening more time for students to work towards the goals they set.

High-Level Solution

Students will answer a pre-survey and upload degree requirements and supporting documents (ex. Course offerings, elective list, etc.) to our AI to receive a curated schedule and suggested goals for the student to follow on their dashboard. At any point, students can add onto their schedule and goals by speaking with the AI and receive answers for any of their questions.

Scope

MVP Scope

- AI Chatbot + Chat History Database
- Pre-set Database (ex. Name, Year, Completed Credits, Total Credits etc.)
- Figma Demo
 - o Onboarding Survey
 - o Dashboard (Schedule, Goals, etc.)
 - o Manager Chat Screen
 - o User Pop-Star Customization

Future Scope

- Front End Added Alongside Chatbot
- Connect Database to AI + Chat History (AI retains user information)
- Figma Demo
 - o Friend Producing Studio (Connect with friends to see their pop icon)
 - o Shop (Buy things to personalize your tour bus room + user pop star icon)
 - o Notification Demo

Out Of Scope

- Full Working Web App
- Canvas Implementation

User Flow

Main User Journey

1. Student opens the app and takes an onboarding survey uploading supporting documents.
2. Manager sees the student wants to work as a Data Analyst and suggest working towards learning SQL and Google Sheets by setting a daily goal of 30 minutes of studying
3. As the student works to completing their goal, they wonder if Social Network Analysis would be a better elective course towards their career path than Database Concepts.
4. Manager explains the differences between the two courses and how a semester would feel if either class was chosen over the other. Manager suggests Database Concepts might fit what the student is looking more towards based on their previous chat histories
5. The student takes the advice and can learn SQL through a college course.

Key Screens

- Onboarding Survey Screen
- Manager Screen
- Dashboard Screen

Feature Requirements

Feature	Description	Priority
AI Chatbot + Chat History	AI responds and records user's response	Must - have
Pre-Set Database	Prototype of Database Structure	Must - have
Figma Base Demo	Onboarding Survey, Dashboard, manager Chat Screen, Pop Icon Customization	Must - have

Chat Bot Front End	Create the Visuals for the Chatbot	Future
Connect Database to AI Chatbot	AI can manipulate User Data and add suggestions (ex. Goals)	Future
Figma (Notification)	Simulate “Did You Finish Goal” Notification that leads to Dashboard	Future
Figma (Shop)	A place to shop for costumes and props to personalize your tour bus	Future
Figma (Producing Studio)	A place to add friends and interact with other friends’ pop icon	Future
Full Working App	Fully developed web app	Out of Scope
Canvas Implementation	Connecting Canvas Course to link up assignments and grades	Out of Scope

AI Behavior Requirements (Can be edited for AI focus teammate)

AI’s Role

Acts as a manager to students that suggest course of actions and goals based on student data and explains the possible outcomes of each choice.

AI Input

- Student Information (Degree Requirement, Year, Assignments, etc.)
- Student Questions
- Image Uploads
- Student Chat History

AI Output

- Career Goal Suggestions (Things to work on towards your career)
- Plain – Language outlining the possible outcome of student questions catered to student chat history
- Follow up questions if students are still unsure. Recommends students college advising for more information.

Guardrails

- Does not replace official advising
- Does not invent requirements
- Does not invent classes
- Does not heavily impose on one singular path
- Clearly explains uncertainties

Assumptions

- Students will update the AI on their recent career goals
- Students enter accurate information about degree requirements and course offerings.
- There are already set students in the database

Open Questions

- Is the AI interacting with a database? If so, pulling from it, manipulating it, or saving chat history?
- What is our onboarding survey question?
-

Success Criteria

- Working AI Chatbot
- Filled Out Example Database
- Full Working Figma Demo
 - Onboarding Survey
 - Dashboard
 - Manager Chat
 - Pop Icon Customization

Design Direction
